Edison Mission Group To Develop Wind Energy Projects in Midwest

ROSEMEAD, Calif., Nov. 1, 2005 -- Edison International (NYSE:EIX) announced that its subsidiary Edison Mission Group Inc. (EMG), through one of its project subsidiaries, has entered into a joint development agreement with Midwest Wind Energy, LLC, of Chicago.

Edison Mission Group is the parent of Chicago-based independent power producer Midwest Generation, which operates about 5,600 megawatts of coal-fired electric generating capacity at six power plants in Illinois.

Midwest Wind Energy is a leading utility-scale wind power development company with a current project portfolio of over 700 megawatts.

Under the joint development agreement, EMG will provide funding and other support to advance a series of Midwest Wind Energy's projects. Upon completion of development activities, EMG plans to own and operate the wind projects.

"To build on our leadership in renewable energy, we are pleased to be working with a fine developer with an excellent track record – especially in a market where we already have a strong presence with Midwest Generation," said Edison International Chairman John Bryson.

"An important part of our decision-making is the fact that Illinois Governor Rod Blagojevich and Wisconsin Governor Jim Doyle have advanced sustainable energy plans that include specific targets for expanding the use of wind and other renewable sources of energy over the next several years," said Edison Mission Group CEO Ted Craver. "That's a compelling signal to developers that Illinois and Wisconsin can be attractive places to invest in renewables."

"This joint development agreement combines Midwest Wind Energy's project development expertise with the considerable financial and development resources of the Edison Mission Group," said Stefan Noe, president of Midwest Wind Energy. "That's a powerful formula for success."

Edison Mission Group has acquired a wind energy portfolio of 318 megawatts at nine projects in Iowa, Minnesota and New Mexico. The company has targeted a portfolio of up to 1,200 megawatts of wind power by 2009.

#####

Edison Mission Group is a subsidiary of Rosemead, Calif.-based Edison International (NYSE:EIX), an electric power generator and distributor, and an investor in infrastructure and renewable energy projects with assets totaling more than \$33.6 billion. The EMG wind projects referred to above are owned by Edison Capital. Midwest Generation is a subsidiary of EMG, operates six coal-fired power plants in Illinois, and has approximately 1,200 employees in the state.
